

Storage of Solar power for Micro Grids in the Islands of Andaman & Nicobar, as well as Lakshadweep

JOINT ELECTRICITY REGULATORY COMMISSION For the State of Goa and Union Territories

These are Renewable Energy deficient areas (poor Capacity Utilization Factor & Low Solar Insolation). Further, these areas mostly being Coastal /Islands are tourist attraction and are having land constraint for Ground Mounted Solar Installation. Details of various areas under the jurisdiction of this Commission are:

Sl.	Location	Latitude	Longitude	Remarks
1.	Andaman & Nicobar	11.68° N	92.77° E	Islands, Not Connected to National Grid, 1000 Kms from Mainland, Tourists place. The Power is Generated by Diesel and is thus very expensive.
2.	Lakshadweep	10° 00' N	73.00° E	Islands, Not Connected to National Grid, 300 Kms. from Mainland Tourists place. The Power is Generated by Diesel and is thus very expensive.

Other Territories under the Jurisdiction of the Commission

3.	Goa	15.4989° N	73.8278° E	Coastal, Tourists Place
4.	Chandigarh	30.75° N	76.78° E	Non Coastal, Small Area, Pollution free area
5.	Dadra & Nagar Haveli	20.27° N	73.02° E	Highly Industrialized 95% Power Consumption by Industry, Highest Per Capita Power Consumption in India because of Industry
6.a	Daman	20° 25' N	72°.53° E	Coastal, High concentration of Industry
6.b	Diu	20° 42' N	71.01° E	Tourists Place, Coastal
7.a	Puducherry- Puducherry	11.93° N	79.83° E	Tourists, Coastal
7.b	Karaikal- Puducherry	10° 55' N	79. 52° E	Tourists, Coastal
7.c	Mahe- Puducherry	11.7011° N	75.5367° E	Tourists, Coastal
7.d	Yanam- Puducherry	16.7333° N	82.25° E	Tourists, Coastal

The Joint Electricity Regulatory Commission (JERC) is pushing for Solar Roof Tops in all the seven territories. The Islands at Sl. 1 & 2 in the above table are most challenging. Details of Sl. 1 and 2 are placed in the annexure 'A' to this document. Reaching various Islands poses problem in high tide thus providing continuous power are achieving high standards of service provisions electricity (SoP)sometime is a challenge.

The JERC looks forward to the Solutions from experts in respect of Solar Power Storage and Micro Grids.

Thanks

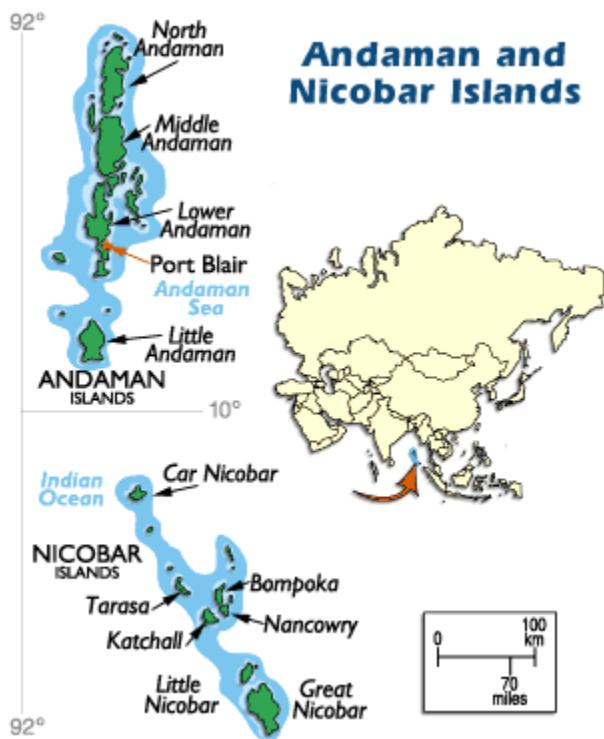

Annexure 'A'

- 1. Andaman & Nicobar Islands** are a cluster of islands scattered in the Bay of Bengal. These islands are truncated from rest of India by more than 1000 kms. The total area of the territory is 8249 sq. kms having population of 379,944 as per 2011Census provisional records & average growth rate is 6.68%. The tempo of economic development has tremendously accelerated along with all-round expansion in the areas/sectors viz. (i) Shipping Services, (ii) Civil Supplies, (iii) Education, (iv) Fisheries, (v) Tourism & Information Technology, (vi) Health, (vii) Industries, (viii) Rural Development, (ix) Social Welfare, (x) Transport, (xi) Increase in District Headquarters (xii) Central Government Department, (xiii) Public Undertaking & other offices, (xiv) Services & Utilities, (xv) Defense Establishment (xvi) Commercial Organisations/Business Centres etc. Thus, these islands have reached at the take-off stage of total economic transformation. All these economic and infrastructure developments requires power as a vital input & to play a key role for achieving overall transformations.

Due to the geographical & topographical peculiarities of these islands including separation by sea over great distances there is no single power grid for the entire electrified island and instead a power house caters independently to the power requirements of area/islands.

The consumer base of EDA&N consists of Domestic, Commercial and Industry, consumers. Sales mix is primarily dominated by Domestic consumers, followed by Commercial consumers. The total consumption of Domestic consumers is approximate 49 percent and Commercial consumers contribute to around 27 percent of total sales.

Source of Power Generation in Andaman & Nicobar

S. No.	Source	Location	Power Station Derated Capacity (in MW)
1	IPP – SPCL	South Andaman	15.000
2	HPP-I	South Andaman	0.600

2. Lakashdweep

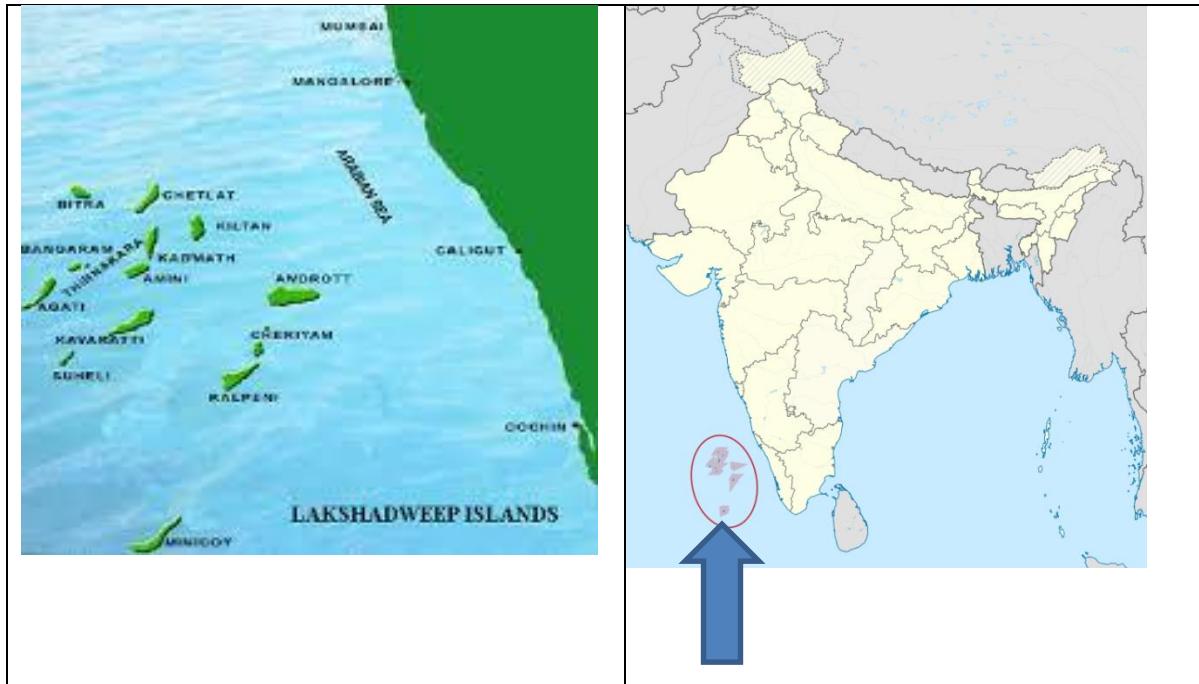

The Union Territory (UT) of Lakshadweep is an archipelago consisting of 12 atolls, three reefs and five submerged banks. It is a uni-district Union Territory with an area of 32 Sq. Kms and is comprised of eleven inhabited islands, 17 uninhabited islands attached islets, four newly formed

islets and 5 submerged reefs. The inhabited islands are Kavaratti, Agatti, Amini, Kadmat, Kiltan, Chetlat, Bitra, Andrott, Kalpeni, Bangaram and Minicoy. As the UT is an archipelago consisting of 11 inhabited islands and located far from the mainland of India, Lakshadweep is entirely dependent on its own generation for supply of power. The power in the UT of Lakshadweep is generated mainly from its Diesel Generating (DG) sets and a very few Solar Power sets.

Atoll/Reef/Bank (alternate name)	type	Land Area (km²)	Lagoon Area (km²)	No. of islets	Pop. Census 2001	Location
